

Table of Contents

Chapter 1: How Science Makes Progress

Goals of the Scientist	1-1
The Scientific Method	1-1
What We Gain from Science	1-3
Does Science Provide Absolute, Objective Truth?	1-4
Beauty and the Formation of Hypotheses	1-4
“Normal” Science and “Revolutions”	1-5
Comparison of Science with Philosophy and Theology	1-6
Pseudoscience	1-7
Science and Reality	1-7
Summary	1-9
Important Concepts	1-9
Glossary	1-10
Questions for Discussion	1-11
Exercise for In-class Discussion	1-12

Chapter 2: Ancient Cosmology: The Earth-Centered Universe

Greek Models of the Universe	2-1
Box 2-1. Fundamental observations of the naked-eye cosmos	2-5
After the Golden Age: Ptolemy to the Scholastics	2-9
Summary	2-9
Glossary	2-10
Questions for Discussion	2-11
Homework Assignment	2-12

Chapter 3: The Copernican Revolution

The Sun-Centered Universe of Copernicus	3-1
The Birth of Modern Observational Astronomy	3-1
Kepler’s Laws of Planetary Motion	3-2
Box 3-1. The properties of an ellipse	3-3
Box 3-2. Motions in the sky as interpreted with Kepler’s Laws	3-4
Galileo, Discoverer of Extraterrestrial Worlds and Modern Experimental Scientist	3-6
Summary	3-9
Glossary	3-10
Questions for Discussion	3-11
Examples of How to Solve Problems on Orbital Motions	3-11
Homework Problems	3-12

Chapter 4: Motions According to Newton

Motion: Basic Definitions	4-1
The Basic Equation Relating Distance to Velocity and Acceleration	4-1
Two-dimensional Trajectories	4-2
Example of a Two-dimensional Trajectory	4-3
Newton’s Laws of Motion	4-4
Newton’s Law of Universal Gravitation	4-6
Application of Newton’s Laws to Planetary Motions	4-7
Energy	4-9

General Characteristics of Orbits	4-11
Philosophical Implications of Newton's Laws: Determinism	4-12
Chaos	4-13
Summary	4-14
Glossary	4-14
Questions for Discussion	4-15
Examples of How to Solve Problems in the Physics of Motion	4-16
Homework Problems	4-19
Chapter 5: Waves and the Electromagnetic Spectrum	
Basic Nature of Waves	5-1
The Doppler Effect	5-2
Interference (Superposition) of Waves	5-3
Diffraction	5-4
Standing Waves	5-4
Sound and Music	5-5
Light and the Electromagnetic Spectrum	5-6
Electromagnetic Radiation from Opaque Objects ("Blackbody" Radiation)	5-8
The Nature of Light	5-10
Summary	5-10
Glossary	5-11
Questions for Discussion	5-13
Examples of How to Solve Problems on Waves and Light	5-14
Homework Problems	5-16
Chapter 6: Surveying the Universe	
Newton's Infinite Universe	6-1
Clockwork Universe Proposal	6-2
The Dark Sky Paradox: the Universe is <u>not</u> Infinite in both Size and Time	6-2
The Cosmological Principle	6-3
The Mystery of the "Spiral Nebulae"	6-3
Distances to Stars	6-4
Distance to a Nearby Star Using Parallax	6-4
Distance to a Star whose Luminosity is Known	6-6
The Size of the Universe	6-6
Distances to Galaxies	6-7
Summary	6-10
Glossary	6-10
Questions for Discussion	6-12
Examples of How to Determine Distances to Cosmic Objects	6-12
Homework Questions	6-14
Chapter 7: Quantum Description of Matter on the Smallest Scales	
Atoms as a Model for Chemistry	7-1
Light Emitted and Absorbed by Atoms: Spectral Lines	7-2
The Bohr Model of the Hydrogen Atom	7-3
Light Emitted and Absorbed by Atoms: The Rules (Kirchoff's Laws of Spectra)	7-6
Box 7-1. How a continuous spectrum forms in an opaque object	7-6
The Doppler Effect (Revisited)	7-7
De Broglie's Particle Waves	7-9
Schrödinger's Wave Equation	7-9

Wave-Particle Duality: Particles as Wave Packets	7-10
Quantum Theory	7-12
The Uncertainty Principle	7-12
The Measurement Problem	7-13
Quantum Mechanics and the Periodic Table	7-14
Box 7-2. Quantum Theory and the Nature of Reality	7-14
Summary	7-16
Glossary	7-17
Questions for Discussion	7-20
Sample Problems on the Quantum Nature of Matter	7-21
Homework Problems	7-22
 Chapter 8: The Fabric of the Universe 1: Particles and Fields	 8-1
The Parts of Atoms	8-1
Fundamental Particles: Building Block of Matter	8-2
Antimatter	8-3
The Four Fundamental Forces of Nature	8-4
Particles, Energy, and the Unempty Vacuum	8-5
Interchangeable Energy and Mass	8-6
The Unempty Vacuum	8-7
Unification of Forces	8-8
Conversion from One Element into Another: Radioactivity & Nuclear Fission & Fusion	8-8
Unstable Nuclei	8-9
Radioactivity	8-10
Stable Nuclei	8-11
Half-life of an Unstable Nucleus	8-12
Nuclear Fusion	8-13
Summary	8-14
Glossary	8-15
Questions for Discussion	8-18
Sample Problems on Nuclei and Particles	8-19
Homework Problems	8-19
Homework Questions Requiring Logic	8-20
 Chapter 9: The Fabric of the Universe 2: Relativity & the Nature of Space-Time	 9-1
The Constant Speed of Light	9-1
Special Relativity: How Motion Affects Space and Time	9-2
Box 9.1. The passage of time in a moving reference frame	9-3
Box 9.2. The effect of relative motion on measurements of length & distance	9-5
Box 9.3. Einstein's thought experiments to clarify Relativity	9-6
Space Travel	9-8
The Four Dimensions of Space-Time	9-8
Mass and Energy	9-8
General Relativity: How Mass Affects Space-Time	9-9
Summary	9-11
Glossary	9-11
Questions for Discussion	9-13
Sample Problems in Relativity	9-14
Homework Questions	9-16

Chapter 10: The Expanding Universe	10-1
Einstein's Model of the Universe and Friedmann's Modification	10-1
The Hubble Law	10-2
The Expanding Universe	10-3
Box 10.1. The origin and nature of time	10-4
The Age of the Universe	10-4
A Cyclic Model of the Universe	10-5
Box 10.2. The origin of the universe	10-5
Summary	10-6
Glossary	10-6
Questions for Discussion	10-8
Examples of How to Solve Problems Related to Cosmic Distances & the Hubble Law	10-9
Homework Problems	10-10
Homework Questions Requiring Logic	10-10
Homework Questions Requiring Extra Thought	10-11
Astronomical Puzzle	10-11
 Chapter 11: Big Bang Cosmology	11-1
The Big Bang Model	11-1
Box 11.1. Cooling of expanding gases	11-1
Progression of the Universe According to the Big Bang Model	11-2
Chronology of the Evolution of the Universe: Overview	11-3
Chronology of the Evolution of the Universe: The Major Stages	11-3
Evidence Supporting the Big Bang Model	11-5
Evidence against the Steady-State Models	11-7
Our Cosmic Horizon	11-7
Problems Solved by Inflation	11-8
Acceleration of the Expansion and Dark Energy	11-9
The Age of the Universe	11-12
The Future of the Universe	11-12
A Universe without a Boundary and without a Center in Space	11-13
Summary	11-13
Glossary	11-14
Questions for Discussion	11-16
Examples of How to Solve Problems Related to the Big Bang Model	11-16
Homework Problems	11-17
Homework Questions Requiring Logic	11-17
Homework Questions Requiring Extra Thought	11-17
Astronomical Puzzle	11-18
 Chapter 12: Formation of Galaxies and Stars	12-1
Current Structure of the Universe	12-1
Evidence for Dark Matter	12-1
Formation of Superclusters, Clusters, and Galaxies	12-3
Black Holes at the Centers of Galaxies	12-4
Box 12.1. Black Holes	12-4
Quasars	12-6
Influence of Black Holes on Gas in the Universe and on the Growth of Galaxies	12-7
"Cannibalism": Merging of Galaxies	12-7
The Formation of Stars	12-8
The Formation of Stars from Gravitational Collapse of Clouds of Gas & Dust	12-9

Summary	12-11
Glossary	12-13
Questions for Discussion	12-15
Sample Problems Related to Material in this Chapter	12-15
Homework Questions	12-17
Chapter 13: Life and Death of Stars	13-1
Nuclear Fusion in the Core of a Star	13-1
Basic Properties of Stars	13-1
The Evolution of Stars	13-3
Hydrogen Fusion Stage	13-3
Red Giant Stage and Helium Fusion	13-3
The H-R (Hertzsprung-Russell) Diagram	13-4
The End State of a Low- to Medium-Mass Star: A White Dwarf	13-6
The Death of a Massive Star: Supernova and Neutron Star	13-7
Black Holes as Remnants of the Most Massive Stars	13-9
Gravitational Waves from Colliding Black Holes and Neutron Stars	13-10
Summary	13-10
Glossary	13-11
Questions for Discussion	13-13
Examples of How to Solve Problems on Stars	13-13
Homework Problems	13-13
Chapter 14: Formation of Planetary Systems	14-1
The Formation of Planets from a Disk of Gas and Dust	14-1
Collisions in the Early Solar System	14-2
Evidence for the Theory of Solar System Formation	14-3
Disks and Planets around Other Stars	14-4
Differentiation of the Interiors of Terrestrial Bodies	14-5
Planets with Atmospheres	14-6
Close-up View of Our Solar System	14-7
The Development of Life	14-9
Summary	14-10
Glossary	14-11
Questions for Discussion	14-12
Chapter 15: A Cosmic Perspective	15-1
Humanity's Place in the Universe	15-1
Better Descriptions through Science	15-1
Questions not yet Answered by Science	15-2
Possible Futures of Humanity	15-2
Our Place in the Universe: Another Perspective	15-3
Questions for Discussion	15-4
Appendix A: Useful Mathematical Techniques	A-1
Comparisons: Forming Algebraic Ratios	A-1
Dealing with Very Large and Very Small Numbers	A-2
Scientific Notation	A-3
Multiplication and Division	A-3
Units	A-4
Appendix B: Periodic Table of the Elements	(single page)

Bibliography

Note: the contents of this textbook, with the exception of some of the historical and philosophical discussion, derives from the author's general knowledge of the field of astrophysics. Some of the historical and philosophical material is from the following sources:

Physics for Poets, 3rd ed., Robert H. March (New York: McGraw-Hill) (1992)

The Coming of Age of the Milky Way, Perennial ed., Timothy Ferris (New York: Harpers-Collins) (2003)

The Structure of Scientific Revolutions, 2nd ed., Thomas Kuhn (Chicago: U. of Chicago Press) (1970)

The Mind of God, Paul Davies (New York: McGraw-Hill) (1992)

What Is Real? The Unfinished Quest for the Meaning of Quantum Physics, Adam Becker (New York: Basic Books) (2018)

An Introduction to Modern Astrophysics, 2nd ed., Bradley W. Carroll & Dale A. Ostlie (San Francisco: Perason/Addison-Wesley) (2007)

Acknowledgments

The author has benefitted greatly by teaching alongside a number of colleagues at Boston University, as well as discussions with these and other fellow members of the faculty:

Declan DePaor, Robert Devaney, James Jackson, Brian Jorgensen, Karl Ludwig, Scott Mohr, Stephanie Nelson, David Roochnik, Allen Speight, Lawrence Sulak, J. Scott Whitaker, and Wesley Wildman. Some of the discussion in this textbook is derived from fruitful interactions, for which the author is grateful.
