Dear Placement Director:

I am writing to highlight great career opportunities for economics PhD's in empirical labor, macro/labor (particularly ML forecasting), public, health, education, development, marketing/advertising, industrial organization (random utility models), and behavioral economics fields. Amazon PXT Central Science team is an interdisciplinary team of economists, statisticians, computer scientists, and behavioral science researchers. The team uses economics, behavioral science, statistics, and machine learning to proactively identify and develop science-driven innovations that simultaneously improve Amazon and the lives, wellbeing of, and value of work to Amazonians globally. The research we produce has direct, positive impact on a diverse workforce of over 1.5 million individuals and growing.

PXT Central Science provides opportunities to lead significant scientific research with direct impact and supports a vibrant interdisciplinary community with ongoing learning opportunities. Researchers have unique access to programs like Amazon Machine Learning University, dozens of conferences and seminars in ML, AI, and causal inference, and researchers work closely with visiting academics through the [Amazon Scholars](#) program.

Could you please circulate this information to your current and past PhD students who may be a great fit? We are interviewing to hire on this year's job market.

Interested economists can apply any time:

New PhD's: <https://www.amazon.jobs/en/jobs/1853150/economist-pxt-central-science>

Very recent PhD's: <https://www.amazon.jobs/en/jobs/1851322/economist-pxt-central-science>

More senior economists (5-ish years post PhD): <https://www.amazon.jobs/en/jobs/1851321/senior-economist-pxt-central-science>

Senior economists (10+ years post PhD): https://www.amazon.jobs/en/jobs/1349363/sr-principal-economist?no_int_redir=1

Thank you.

Justine

Justine Hastings, PhD

Chief of People-centered Science, VP PXT Science
